

maximize your EqualLogic investment

Unlock the value of your Dell EqualLogic array with iland cloud-based data replication and recovery options built for a Dell EqualLogic environment.

iland, a Certified Dell Enterprise Architecture Partner, is a premiere provider of cloud computing infrastructure built exclusively on Dell EqualLogic SANs. iland is also an industry leader in cloud-based disaster recovery solutions—which makes iland the ideal data replication and recovery partner for your Dell EqualLogic array.

Replication

Protect your critical data with cost-effective data replication to any of six high-availability cloud computing datacenters across North America and Europe. The iland Continuity Cloud® solution works seamlessly with Dell EqualLogic SANs, allowing you to fully harness the power of your SAN investment at a fraction of the cost of building and maintaining a secondary site.

Replicating to any of the iland SAS 70 Type II certified datacenters allows you to mitigate risk, prevent data loss, and reduce unplanned downtime. You can also make your IT budget go further by eliminating large capital expenditures (CapEx) for securing your data and replacing it with predictable, monthly operational expenditures (OpEx) with the iland Continuity Cloud.

Replication + Recovery

The iland Continuity Cloud provides not just a replication target for your data—but a complete disaster recovery solution leveraging highly available VMware infrastructure to recover your critical servers and applications. iland provides standby server resources that mirror your primary site and are ready when you need them. Because they are standby, you only pay a monthly reservation fee to guarantee the resources are available. You can choose multiple data protection solutions and scale-up or down to address changing business needs. Whether you are looking to replicate a few TBs of data or recover your entire environment, the experts at iland are able to assist.
