

recover quickly with the iland Continuity Cloud™

vmware®
PARTNER NETWORK AWARD
2012 GLOBAL WINNER
2010-2012 AMERICAS WINNER

Protect your data and services from downtime—and your business from losing revenue and its reputation. The iland Continuity Cloud™ prepares you for the unpredictable with IT infrastructure that's both resistant to catastrophe and has the agility to recover quickly when disaster strikes.

iland pioneered solutions for data replication and business continuity to a true VMware-based cloud environment. Our experience is evident with the iland Continuity Cloud, designed to provide cost-effective business continuity options in North America and Europe.

Achieving Business Continuity

The most important objective of your business continuity plan is to ensure that business-critical data and processes are secured, and that unplanned downtime is minimized. This means being able to restore your IT infrastructure, data availability, operational processes, and business processes quickly and completely.

Meet your RTO and RPO Objectives

The iland Continuity Cloud allows you to meet your recovery time objectives (RTO) and rapidly restore business applications and data access. Multiple replication methods ensure your Recovery Point Objective (RPO) is met with a variety of features from de-duplication and compression to WAN optimization and manual importing, ensuring that you make the most of your current replication bandwidth and IT budget.

iland Recovery Action Plan™ and DR Testing

No two customer DR plans are the same and because of this we designed a process of clearly documenting and implementing and managing an evergreen iland Recovery Action Plan™ for each customer. The plan is designed for comprehensive and efficient recovery of resources and covers a range of items including who from the customer is authorized to request a full DR failover or schedule a failover test to the priority in which workloads are recovered.

Standby Resources

iland provides both reserved and pay-as-you-go standby resources that mirror your primary site and are ready when you need them. You can choose multiple data protection solutions and scale up or down to address changing business needs.

Multiple Replication Options

Several levels of protection help you recover from downtime – ranging from simple back-up to real-time replication and failover by leveraging the latest guest, host and array based replication technologies. Your workloads can be replicated from virtual or physical environments to our high-availability cloud infrastructure and then hosted in standby or active mode.

Managed or Unmanaged

With managed options, we take care of host-based or SAN-to-SAN replication to our global cloud datacenters to ensure the integrity of your data and the continuity of your business. Alternately, you can internally manage the process and use the iland Continuity Cloud as a replication target.

Integrated Physical Appliances

iland supports mixed virtual and physical solutions with dedicated appliances and colocation services within iland Cloud datacenters. Whether customers require physical servers, routers, firewalls, or any other hardware, iland provides integration for these devices into the iland Continuity Cloud.

Our Partners

iland supports the following partners for disaster recovery solutions: Acronis®, Dell, Double-Take®, Veeam, and VMware®
