

iland Secure DRaaSSM with Veeam

what is iland Secure DRaaS with Veeam?

iland's Secure Disaster-Recovery-as-a-Service with Veeam integrates your on-premises Veeam Management with an extension to the cloud, providing replication and failover, in the event of a disaster. Complementing the Veeam Cloud Connect backup service, this option enables customers to quickly configure both services, select which VMs to protect with backup and DR, and failover, as needed.

Disaster recovery is often a neglected part of IT plans – an afterthought. Emergencies come in many forms – from weather to hackers to errors, costing businesses dearly. Now, with an integrated solution from iland and Veeam, it becomes easy and cost-effective to know you're protected.

we are the DR experts

Why did analysts award iland a Leader ranking in Gartner's DRaaS Magic Quadrant? Because we are experts in DR. We analyze existing and future DR capacity and configuration, and make DR recommendations tailored to each customer.

After hundreds of DR deployments, we operate a well-established and comprehensive methodology, partnering with some of the best replication software providers available. Our experienced iland team will design and implement a DR plan that fits your organization's needs.

why choose iland Secure DRaaS with Veeam?

simplify data protection

Through the same Veeam console used for existing backup and replication tasks, you can add iland as a service provider target. You can then replicate both for backups and disaster recovery from the same console, sending your workloads securely to the iland Secure Cloud ConsoleSM.

reduce disaster recovery costs

Select only the machines you want to replicate for DR and for backup, reducing costs and enabling you to optimize your IT spending. With both options available from a single solution, you can manage your appetite for risk against your cost targets.

iland Secure DRaaS with Veeam at a glance

- ✓ Full and partial fail-over
- ✓ Encryption in-motion and at-rest
- ✓ Self-service testing
- ✓ Built-in traffic reduction mechanisms and network extension functionality
- ✓ Easy configuration through the Veeam Availability Suite v9 console
- ✓ Best of breed infrastructure with encrypted storage

why choose iland

- 20+ years supporting customers and their critical workloads
- 97%+ customer satisfaction for technical support
- 8 global data centers in NA, EMEA and APAC with further growth plans
- Consultative, flexible customer relationships
- Leader – Gartner Magic Quadrant for DRaaS 2016 & 2017
- Leader – Forrester Wave for DRaaS Providers 2014 - 2017

iland named a Leader by Forrester for DRaaS

test your DR plan

The only surefire way to ensure your disaster recovery plan will work in the event of a disaster is to test it. iland Secure DRaaS with Veeam enables you to test your solution whenever and however often you like. With the confidence of periodic successful tests, you'll have the confidence to count on it in a real disaster.

simplify data protection

Be confident that your data is secure with end-to-end encryption that ensures data is secure during replication; it is secure as it travels across the wire from your data center to iland's Secure CloudSM; and is secure at rest.

straightforward pricing

iland strives to streamline pricing for our customers, so we've designed a simple model for DRaaS with Veeam – just pay per GB of storage needed.

- No Setup Fees
- No Per-VM Fees
- No Bandwidth costs
- No charge for our expert customer support

In the event of a failover, you'll be charged for any burst capacity used.

and, the rest of the reasons

There are a host of other reasons to choose iland – and we'd love to highlight just a few more:

- 100% infrastructure availability SLA
- All of our data center locations across the US, EMEA and APAC hold ISO 27001 and SOC2 certifications
- Reports showing compliance of the failover target location to industry regulations are available through the iland Secure Cloud Console
- We have achieved the Cloud Security Alliance STAR Gold Certification which is a rigorous third-party independent security assessment of cloud service providers

so, what's next?
