

IaaS
Secure Cloud

Transform.

Confidently extend your data center to the cloud with proven VMware-based Infrastructure as a Service.

Today's traditional businesses are transforming their IT operations for the future.

As a result, established companies that have historically owned, maintained, and managed their own IT operations in their own data center are now evolving how they support their business operations by transforming their IT to the cloud. For many customers, moving to the cloud can mean significant planning and effort to ensure application requirements are met.

For VMware customers, moving to the cloud is made simple with iland Secure Cloud. With iland, VMware workloads are seamlessly migrated to a proven, VMware-based IaaS platform that is designed for performance, availability, and security. This provides customers with confidence that their applications will perform as expected in the new environment.

Because iland Secure Cloud is VMware-based, the management tools and capabilities are similar to those already used on-premises, meaning existing skills can be transferred. Coupling these capabilities with iland's global footprint, focus on security and compliance, and 100 percent availability SLA, iland Secure Cloud extends your data center to the cloud so you can focus on what matters most to your business.

Proven, VMware-based IaaS

As a result, established companies that have historically owned, maintained, and managed their own IT operations in their own data center are now evolving how they support their business operations by transforming their IT to the cloud. For many customers, moving to the cloud can mean significant planning and effort to ensure application requirements are met.

Simplified pricing

iland has drastically simplified pricing to be "all-inclusive" of storage, compute, network, and other associated costs that are typically tracked separately by other providers. This enables customers to easily forecast the cost of IT in the cloud over time, and ensure budgets are adhered to on a monthly or annual basis.

The VMware-based cloud platform designed with advanced security and compliance to protect your business and power innovation.

Integrated management

iland's Secure Cloud Console delivers an integrated experience across all services, comprehensive security and compliance management, billing, reporting and many other features that enable customers with complete control over their IaaS environments. In addition to integration, iland provides extensive API and SDK extensibility. This API-first approach enables customers to build their own applications or services as needed for further IT value.

Global footprint and 100 percent availability SLA

iland ensures the customer environment performs in the same manner as on-premises. Confidence in performance comes from proven technology. Availability comes from an iland commitment backed by an audited, 100 percent SLA providing continuous application uptime. For customers requiring multiple global locations, iland maintains a redundant global footprint in North America, EMEA, and APJ.

No-compromise security and compliance

With iland, customers can leverage a dedicated team of experts focused on security and compliance. iland's industry-specific security and compliance protocols for sensitive data, and cloud service locations were achieved by iland to meet global and geographic compliance requirements.

Comprehensive planning, onboarding, and support

iland understands the importance and the challenges of migrating to the cloud without disruption. Not all companies have the in-house resources, time, or desire to risk the downtime associated with moving mission-critical applications and sensitive data off-premises. To help customers simplify their migration to the cloud, iland takes a comprehensive approach including application resource planning and sizing, migration, training, and documentation. iland also includes Premium Support with all services.

About iland

iland is a global cloud service provider of secure and compliant hosting for infrastructure (IaaS), disaster recovery (DRaaS), and backup as a service (BaaS). They are recognized by industry analysts as a leader in disaster recovery. The award-winning iland Secure Cloud Console natively combines deep layered security, predictive analytics, and compliance to deliver unmatched visibility and ease of management for all iland cloud services.
