iland LabEngine

What is iland LabEngine?

iland LabEngine allows organizations to rapidly deploy and scale virtual environments that can be used for testing, QA, training events and even sales.

With LabEngine, users can quickly create environments based on new or existing virtual machines. These envrionments can be saved as templates and deployed in scale through the iland platform. Organizations can create elaborate environments, including nested hypervisors, complex networking and multiple virtual machines. With the ability to include instructor views and user guides, you can quickly get users working with your provisioned environments.

Supported by the iland Secure Cloud Console℠, iland LabEngine is a cost-effective, scalable, agile system that allows organizations to worry about delivering content to their consumers without worrying about infrastructure.
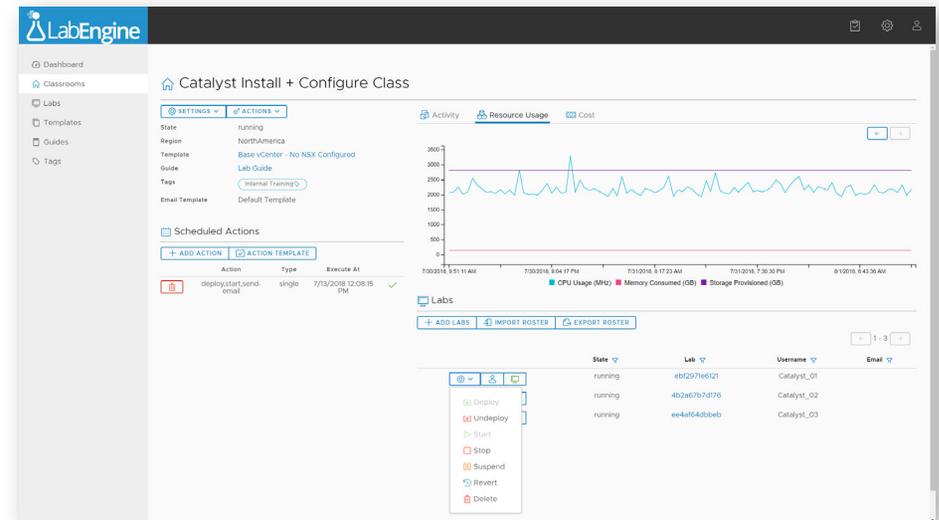

Why choose iland LabEngine?

In today's fast-paced enterprise, IT deparments are under pressure to deliver agile and scalable solutions for a variety of internal teams. This puts a huge burden on IT to allocate infrastructure resources to build, deploy and manage their teams' required systems.

Customer Education
The ability to train your users with complex environments and in-depth user guides keeps users fully informed. LabEngine can provide re-usable template training environments, which allows instructors to focus on content creation, not hardware.

Marketing Events
Hands-on labs are becoming an increasingly popular way to show the benefits of your solution at events or tradeshows. Give your team the ability to spin up an isolated, reliable environment to showcase your solutions.

Product Management
Product teams thrive off of customer feedback and beta usability testing. The ability to rapidly spin up a controlled environment for feedback ensures that the product teams will obtain the information they are looking for to improve their products faster than ever before.

Pre-sales Tool
In today's software environment, simply downloading a software package to test is often not enough. By equipping pre-sales teams with a reliable demo environment and on-demand, fully configured and populated test drive, the odds of a prospect adopting the product increases dramatically.

So, what's next?
