

Data Protection at its best

Data loss caused by user error is the No.1 reason why organizations lose critical sales, marketing, customer, financial, and IP data stored in email and documents. Creating a backup of your Office 365 data is not an option anymore—it's a necessity. Office 365 will make sure your data is made available but it does not generally keep a copy of that data forever.

Basically, old deleted data will be aged out and eventually purged after a period of time. But what would happen in cases of accidental deletions, ransomware attacks, or outages? Can you accept the unavailability or loss of critical data which is the foundation of your business? Backup of data is a shared responsibility—you should create regular backups of your crucial data for easy recovery and restore.

Prevent the unexpected

iland Secure Cloud Backup for Microsoft Office 365 with Veeam can cover and protect against:

- Accidental Deletion
