

# iland Secure Cloud Object Storage

Companies continue to retain more and more unstructured data in the form of logs, backups and other long-term retention items. This increase in unstructured data becomes unmanageable as customers look to move more of their applications and data to the cloud.

iland Secure Cloud Object Storage<sup>SM</sup> is an easy-to-use, low-cost, scalable solution that offers the benefits of cloud storage for managing your data sprawl in a variety of use-cases: backup files, application data or general file storage.

## Store data in a secure, easy-to-use and cost-effective environment

- > S3 API compatible
- > Data stored with a focus on security and data integrity

## Self-service ability to control storage parameters

- > Control data security levels access parameters
- > Self-service access controls through the iland Secure Cloud Console, including identity access management and classifying data buckets as public and/or private.
- > “Quick Share” is an innovative iland feature that allows users to share large data files with outside users. These files can be shared via a limited access download link, and there’s no restriction on data file size.

## Benefits of iland Cloud Object Storage

- > **Rapidly scale data storage needs**  
Flexible cloud-based storage platform designed in an elegant, nonhierarchical file system that enables users to easily change their data storage needs.
- > **Fast data retrieval and recovery**  
All data objects are stored with their own metadata, facilitating a faster, more accurate retrieval and recovery process.
- > **Availability and Data Protection**  
All data objects are stored with integrated versioning and three replicated instances per data center.
- > **Security**  
Built-in, data-at-rest encryption for all data objects with an intuitive key pair management system that provides secure access to your data.

## Operated on world-class data centers and infrastructure

- > Stringent compliance and security posture—all of our data center locations across the Americas, Europe, Australia and Asia are compliant with HIPAA, SOC2, ISO 27001, Privacy Shield, FISMA-MODERATE, GDPR certifications and more.
- > Cloud Security Alliance STAR Gold Certification.
